

## Galvanized Redrawing Wire

**Galvanized redrawing wire** is destined to the special uses for which the maximum degrees of superficial finish great constancy of the resistance and firmly anchored coating. Its brilliant aspect attracts the attention of the users and stands for high quality and a long shelf life. In production of articles like handles of pails, suits hanger, closings of boxes, **galvanized redrawing wire** has reached an elevated level of reliability, which assures no interruptions of production, reduction of the discards and the times of job, in synthesis greater productivity and lower cost of product.

Through the process of redraw after galvanized, **galvanized redrawing wire** can be divided into **electro galvanized redrawing wire** and **hot galvanized redrawing wire**.

**Material:** quality low carbon galvanized iron wire

Galvanized Redrawing Wire

### Features:

- \* Soft quality
- \* High tensile strength
- \* Good malleability
- \* Bright and smooth surface
- \* The fastness is enduring.

### Application:

**Galvanized redrawing wire** is used in making clothes rack, making nail, constructing, correspondence equipment, medical instrument and weaving netting, brush, high pressure tube, building, handicraft etc. It is widely used in reinforcing construction wire mesh, welded wire mesh panels, heavy type welded wire mesh, weaving chain link fence, crimped wire mesh, making clothes rack, nails brush steel rope, high pressure tube, construction and handicraft products.

**Specification:**

Serial Number	SIZE	Diameter(mm)	Standard Bundle Weight (Kg)
1	8#	4.0	50
2	10#	3.5	50
3	12#	2.8	50
4	14#	2.2	50
5	16#	1.6	50.25
6	18#	1.2	25
7	20#	0.9	25
8	22#	0.7	10-25
